EXPLAINED.

The Mystery of a Veritable Snake in a Horse's Eye.

New York Sun. Many passengers on the Jersey City ferry-boat yesterday looked for "the horse with the snake in his eye."

"I first saw the snake about three months ago, when the owner called my attention to it. It was then only about an inch long, and was black."

Mr. W. H. Arrowmith was found at the American Veterinary College. He said: "The disease is one seldom seen here."

"It is called in the books filaria oculi, and is very prevalent in warm climates—in India, Australia and in Arabia."

It is supposed to be due to germs taken into the body when the animal is feeding upon grass in low, marshy ground. The germ or eggs of the parasite are developed into the active life of a worm, and that worm penetrates into different parts of the body, sometimes to the eye, sometimes to the brain, sometimes into other organs.

But it has been so seldom observed either in Europe or here that comparatively little is known of its progress, developments or results. There have been, I believe, but four or five cases reported in both Europe and this country.

When developed, as it is in the eye of the horse of Dodge & Bliss, it is a parasite white worm, varying from one to three inches in length and about as thick as an ordinary pin.

While in the aqueous humor of the eye it is in continual motion. When I examined it this morning by means of the ophthalmoscope I found it in the anterior or aqueous chamber of the eye. It was very active. The corners of the eye were somewhat opaque, and the iris somewhat distended.

By careful observation we could discern a granular surface upon the anterior face of the crystalline lens. The horse otherwise was in perfect health. He works and does not show any apparent inconvenience, with the exception of a certain nervousness during examination of the eye.

The activity of the parasite is such at present that it is impossible to see whether it has a head or tail, or what its internal construction may be. But, from microscopic observation, we will probably be able to discover head, tail and alimentary canal.

According to Percival's Hippopathology and Williams' Veterinary Surgery, even the sex of these parasites is clearly discernible under the microscope. I do not believe that this parasite is ever found in human beings, but only in grass eating animals that have grazed in low, marshy ground, and that it is in fact, only a matter of accident in the course of its penetration of the body of the horse.

Capt. McCafferty says that the horse was pastured upon the sort of ground spoken of by Mr. Arrowmith, about a year and a half ago.

"Don't Hurry, Gentlemen." Said a man on his way to be hanged, "there'll be no fun till I get there."

IMPROVED HORSES. Coaches, Cleverlands, Normans and Clydesdales. Correspondence, Drovers' Journal.

quest for the city market by buyers who pay from \$400 to \$600 per pair and sell them for twice as much.

They are a cross of the Cleveland bay and thoroughbred, and may be reproduced in this country by a cross of the Cleveland bay and Morgan.

The Cleveland Bay, 164 hand, 1,550 pounds, long, rang, high-headed, high stoppers, fast walkers, strong pullers and great travelers, good for ten miles an hour with a carriage load or five with a wagon load; a fine carriage horse, a noble draft horse, and a magnificent all-purpose horse; he must be the coming horse.

When Virginia imported the thoroughbred, New England imported the Cleveland and led the formation of a stock in the north twice as valuable as that in the south. A fresh infusion of the New England Cleverlands, much smaller and faster than of old, will give us the horse we need.

The Norman is a gray or black, sixteen and a half hands, 1,700 to 2,000 pounds; he is blocky, compact, close ribbed, short necked, with high head, clear eye, fine ear, expanded nostrils, broad breast, powerful legs and immense muscles. He is descended from sire as well as dams that are worked. In France the horses are all kept entire, and those of most value are kept for breeding, but are still put to hard work, and made and kept strong, hardy, healthy, quiet and well broken. Like produces like, and the stock is the most powerful, docile and useful in France.

The Norman is the general favorite; important more than all other horses, and liked better and better the more he is known. His colts sell better the more there are of them. A shipper has just paid from \$225 to \$300 each for a carload at Bloomington. He is the favorite.

The English draft, or Shire horse, is a black or bay about seventeen hands high, 1,800 pounds, short, blocky, compact, heavy boned and muscled, back short, shoulders and loins long and powerful, legs large and firm; a horse of intelligence and docility, of even temper, a ready and agreeable worker, of prodigious strength and great endurance. He crosses well with other stock and sells high. He is a treasure. Be sure and get him.

The Clydesdales are a strain of the English draft horse, of recent origin in Scotland, and are a black horse of extraordinary symmetry and vigor and of special potency in transmission. They are black, bay or brindle, with ankles and face often white, about seventeen hands, and 2,000 pounds, bodies long and remarkably cylindrical from end to end; legs large, round and hairy, often having a sort of mane on the forelegs covering the hoofs. They are remarkably quiet and docile, even workers, staunch and mighty.

The Resurrection of Lazarus. Was a miraculous operation. No one thinks of raising the dead these times, but a case of a man who had been completely restored by BURDOK BLOOD BITTERS to genuine and lasting health.

PERSONAL JOURNALISM. A Hoosier Editor Assailing the Reputations of Gentlemen of Lafayette.

A special from Lafayette, Ind., to The Cincinnati Enquirer says: Society circles in this usually proper city are in a state bordering upon a ferment, and there are several very worthy ladies and very excellent gentlemen here whose indignation knows no bounds.

The case of the notorious condition line in the published opinion of the charming lecturer and writer, Mrs. Helen M. Gougar, whose editorial opinions are given to the world in her temperance and woman's suffrage paper, Our Herald. The story is a mixture of temperance, scandal, politics and bad blood, and is to-day the all-absorbing morsel rolling around the gossip tongues of this community.

Several well known citizens abandoned the republican ranks and supported the democratic candidate for state senator, very much to the disgust and disappointment of Mrs. Gougar, who was very earnest in her support of the republican nominee, Capt. DeWitt Wallace. The very clever captain was defeated, and that, too, in this county, which usually gives from 500 to 1,000 republican votes.

One of these men for years of olden days of the Star city by openly parading himself with a woman of disrepute, whom he supported, but finally deserted to marry a woman altogether above him socially and morally. To-day he is not noted for brains, morally or financially.

Another of these blatant tria assumes great respectability; but the "danger signal," caused by wine dinners and midnight saloon revels, is prominent, and his fine trappings are, many of them, unpaid for, and what was once a life of promise is rapidly falling away into that of physical, mental, moral and financial disease.

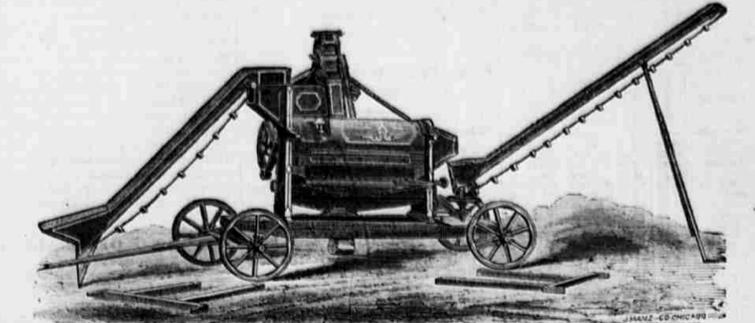

He fears that women will desert him for politics, but fails to turn the glass and note the fact that at home in a nest of little ones often deserted for the giddy dance by the wife and mother (whose act this father encourages) and house duties are neglected to such an extent as to be a matter of notorious comment.

This man greatly fears the association of men and women at the polls, and sees and encourages without blush and shame his wife wrapped in the arms of strange men while engaged in the dizzy waltz.

The third is characterized as a man divorced from his wife; cause, inhuman treatment.

Like a thunderbolt this explosion has fallen upon the gentlemen alluded to. The air is full of recriminations, and all sorts of immoral charges are made. Private characters have been assailed, and there is a prospect that some startling details may be given to the public. Mrs. Gougar has stirred up a hornet's nest.
